

SELECTING THE PROPER SIZE

Step 1: Measure or calculate dimension **(A)** as shown in the detail on the right based on the site's grade conditions and foundation height.

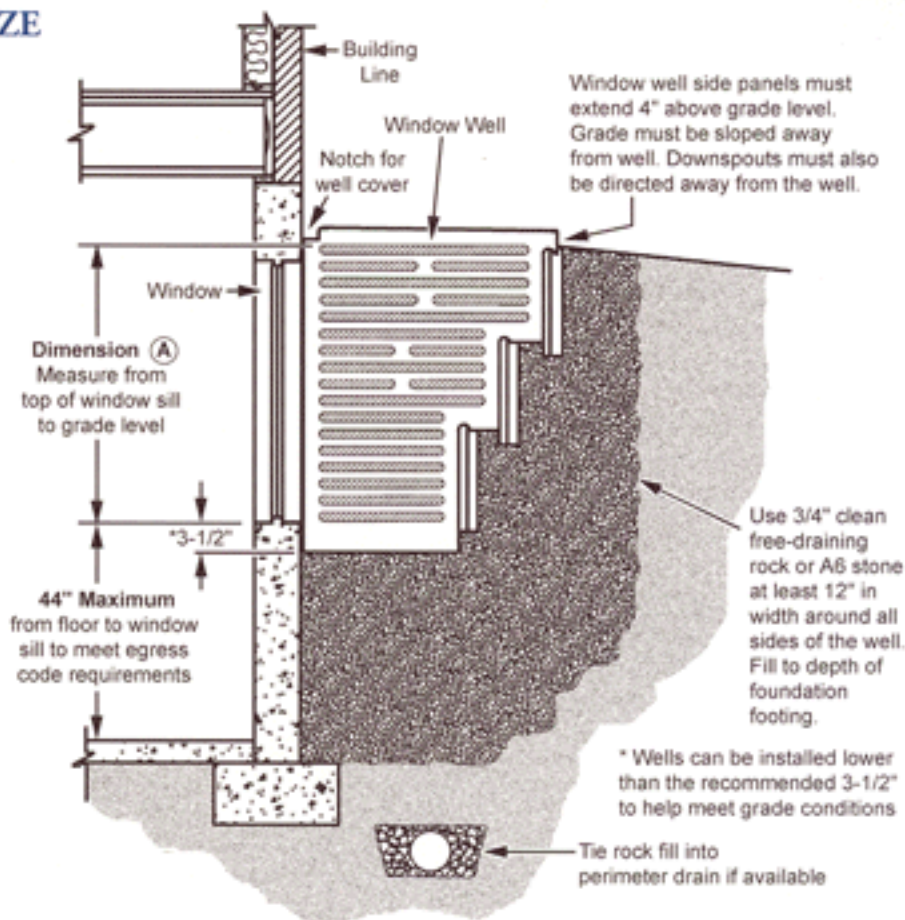

Step 2: Determine the required window well side panel height by performing this simple calculation:

$$\text{Required Side Panel Height} = \text{Dimension (A)} + 7\text{-}1/2''$$

From the first column in the table below, select the closest side panel height that will meet the site conditions.

Step 3: Once the side panel height has been determined, read across and select the desired window size. Select window model number based on the foundation wall thickness. Note that all Bilco window sizes meet building code requirements for emergency egress.

Step 4: With the window size selected, read across to select the proper window well and cover.

STANDARD SIZES AND MODEL NUMBERS

Side Panel Height	Window Size	Window Style	Series 6000 Window Model Numbers				ScapeWEL Window Well					Optional Cover	
			(Select by foundation wall thickness*)				Model Numbers		Number of Tiers	Inside Width	Projection From Foundation	Model Numbers	
			7-1/2" Nominal	7-7/8" Full	9-1/2" Nominal	9-7/8" Full	Well	Ext. Panel				Dome	Grate
